The Vibration Laser Screed is a lightweight concrete-leveling solution. Compact and easy to assemble, it operates in confined spaces without the need for specialist training, and works with all red-beam rotating lasers.

Concrete Wolf®

The vibration screed's design reflects a wider trajectory in construction technology — from early mechanized concrete finishers, through the introduction of laser-guided leveling systems, to the present shift toward lighter, more portable, and operator-friendly machines.

Aligned with global R&D trends prioritising automation, ergonomics, and sustainability, the Vibration Laser Screed embodies a modern approach to industrial innovation: reducing reliance on skilled labour while increasing accuracy, speed, and on-site safety.
